## 1 Introduction to StudentHire

StudentHire is an advanced, AI-powered mobile application designed to bridge the gap between student job seekers and potential employers within the academic community. Powered by **Firestore Realtime Database** and integrated **Artificial Intelligence (AI)**, the platform allows students to build resumes and analyze their CVs, while enabling recruiters to seamlessly post vacancies and automatically shortlist top talent.

**Key Highlight:** StudentHire connects students with employers through AI-driven CV analysis and automatic shortlisting — reducing hiring time and improving candidate matching accuracy.

## 2 App Startup & Role Selection

### Splash Screen

Upon launching StudentHire, a premium splash screen displaying the official app logo is initiated, establishing the brand identity before proceeding.

### Role Selection Screen

Following the splash screen, the user is directed to the Role Selection interface. Two primary options are presented: **Student** (Job Seeker) or **Recruiter** (Employer). The user must select their role to proceed to the registration and login systems.

## 3 Account Registration (Sign-Up Process)

New users must create an account by completing the designated registration form based on their selected role:

### A. Student Sign-Up Dashboard

|                 |                                        |
|-----------------|----------------------------------------|
| Full Name       | Student's legal full name              |
| Email Address   | Valid email for account authentication |
| Contact Number  | Active phone number                    |
| Password        | Secure password for account access     |
| University Name | Name of the enrolled institution       |
| Degree Program  | Current academic program (e.g., BS IT) |

### B. Recruiter / Employer Sign-Up Dashboard

|                |                             |
|----------------|-----------------------------|
| Full Name      | Recruiter's full legal name |
| Email Address  | Professional email address  |
| Contact Number | Business contact number     |
| Password       | Secure account password     |

|                          |                                 |
|--------------------------|---------------------------------|
| <b>Company Name</b>      | Name of the company or industry |
| <b>Job Designation</b>   | Current job role / title        |
| <b>Industry Category</b> | Sector or industry type         |

## 4 Secure User Login System

After successful registration, users access the application through a centralized login gateway powered by **Firestore Authentication**:

### Step 1

Enter registered Email Address and Password in the provided input fields.

### Step 2

Select your role using the toggle buttons: **As a Student** or **As a Recruiter**. The selected role will be highlighted.

### Step 3

Tap the **Login** button. The system validates credentials with the Firestore backend and routes you to your personalized dashboard.

## 5 Student Module Features (Job Seeker)

Once authenticated, students access a dashboard equipped with intelligent career management utilities:

### Integrated Search Bar

Located at the top of the main student feed, enabling real-time querying of all active job vacancies across the marketplace.

### Job Specification & Description

Tapping any listed job opens a detailed view displaying full requirements, job specifications, salary allocations, and comprehensive job descriptions.

### AI CV Analyzer

Inside the **Apply Now** portal, users upload their CV and tap **Analyze Your CV through AI**. The embedded AI engine scans the document, outputs smart improvement suggestions if errors are found, or approves the submission if it meets industry standards.

### AI Resume Builder (Slide Gesture)

Using a sleek slide gesture on the dashboard, the **Build CV** drawer opens. Students input their credentials and the app instantly auto-generates a professional, formatted resume.

## 6

## Recruiter Module Features (Employer)

The Recruiter Dashboard provides comprehensive control over talent acquisition and vacancy management:

### Active Job Board

The main dashboard hosts an interactive list of all previously uploaded job vacancies with a quick-navigation search utility.

### Post New Job

A dedicated form allows employers to create vacancies by specifying: **Job Title**, **Offered Salary**, **Job Location**, and **Job Description & Requirements**. Upon submission, the job is instantly published live to the Student Feed via Firebase sync.

### Applicant Tracking & View CVs

Clicking any active job aggregates all submitted applications — supporting high-volume traffic of 500 to 1000+ applicants. Recruiters tap **View CV** to inspect any individual applicant's full profile.

### Manual Shortlisting

Recruiters can manually organize entries by pressing the **Shortlist** action item to filter and highlight preferred candidates.

### AI Top 10 Shortlisting (Advanced)

The **AI Top 10 Shortlist** button commands the AI engine to automatically analyze all submitted CVs against the job parameters and instantly display the top 10 best-matched candidates — eliminating administrative overhead.

## 7 Application Workflow — Flowchart

The diagram below illustrates the complete navigation and workflow of the StudentHire application, from initial launch through to all available features for both user roles:

## System & Database Infrastructure

### Firebase Backend Core

All user authentication, real-time database transactions, and structural updates are synchronized live using **Firebase Cloud Services**, ensuring data integrity and instant cross-device availability.

### Network Connectivity Requirements

An active internet connection (Wi-Fi or Cellular Data) is mandatory to operate all cloud-driven features including AI CV parsing, job synchronization, and database transactions.

**Important: StudentHire requires a stable internet connection at all times for full functionality. All data is securely processed through Firebase — no data is stored locally on the device.**
